## PART 1

# Getting Started

Welcome to Fitro360, the enterprise operating system for modern fitness businesses. This part walks you through signing in, understanding the user roles, and finding your way around the workspace.

# Signing In

Every Fitro360 user signs in from the same secure entry page. Your role is detected automatically and you are routed to the correct workspace — there is nothing to configure.

Figure 1 — Signing In

## How to sign in

- 1 Open your gym's Fitro360 URL in any modern browser (Chrome, Edge, Safari, Firefox).
- 2 Enter your username in the USERNAME field.
- 3 Enter your password in the PASSWORD field. Click the eye icon if you want to confirm what you typed.
- 4 Click **Sign in to dashboard**.

## Demo accounts (test environment only)

When working in a sandbox or training environment, the panel at the bottom of the sign-in page offers one-click autofill for the four demo accounts: Owner (gymowner), Manager (manager1), Trainer (trainer1) and Member (member1). These shortcuts are hidden in production deployments.

## Forgot your password?

Click **Forgot password?** next to the password field. An email with a reset link will be sent to the address on file. If you do not receive the email within five minutes, contact your gym administrator.

### ✓ **Bookmark your workspace**

After your first sign-in, bookmark the URL shown in your browser. The same URL works for every role at your gym.

## PART 2

# Platform Administrator

Platform Administrators operate Fitro360 itself: onboarding new gyms (tenants), managing the SaaS subscription plans that gyms purchase, monitoring billing health, and configuring the global Stripe integration. This section is for the team that runs Fitro360 as a service, not for individual gym owners.

# Admin Dashboard

The Admin Dashboard is the command center of the entire platform. It surfaces high-level KPIs and the most important alerts at a glance so you can spot problems before they become support tickets.

Figure 2 — Admin Dashboard

## What you see

- **Total Tenants** — every gym account on the platform, regardless of status.
- **Active Subscriptions** — gyms with a paid, in-good-standing subscription.
- **Trialing** — gyms still inside their free trial window.
- **Past Due / In Grace** — gyms whose last payment failed; clicking opens the at-risk list.
- **MRR & ARR** — recurring revenue rolled up across all tenants.
- **Recent Activity** — sign-ups, plan changes, cancellations and payment events from the last 24 hours.

**✓ Daily routine**

Open this page first thing in the morning. The Past Due tile and Recent Activity together give you a 60-second health check on the entire platform.

# Tenant Management

This is the master list of every gym on Fitro360. From here you create new tenants, suspend ones in violation, or jump into a tenant's workspace as a support user.

Figure 3 — Tenant Management

## Common actions

- **Create tenant** — provision a brand-new gym account with its own isolated database scope.
- **Edit** — update gym name, contact, branch limits, plan, or trial end date.
- **Suspend / Reactivate** — temporarily disable login for all of a gym's users (does not delete data).
- **Impersonate** — open the gym's workspace as a support user to reproduce an issue.
- **Search & filter** — by status (active, trialing, suspended, past\_due), plan, or signup date.

## Tenant data isolation

Every record (members, payments, schedule, etc.) is scoped to a single `tenant_id`. Even with admin access you can never see one gym's data while inside another gym's workspace — the row-level filter is enforced at the storage layer, not the UI.

# Subscription Plans

These are the SaaS plans that gym owners choose between (Basic, Pro, Enterprise, etc.). Each plan defines pricing, limits and which advanced modules are unlocked.

Figure 4 — Subscription Plans

## Each plan controls

- **Monthly and annual price** — set independently; annual is typically discounted.
- **Trial days** — how long a new tenant can use the plan before being charged.
- **Limits** — maximum members, branches, trainers, and staff users.
- **Feature toggles** — invoicing, inventory, tax compliance, AI scheduling, advanced reports, etc.
- **Stripe sync status** — whether the plan is mirrored to Stripe and ready to sell.

## Creating or editing a plan

- 1 Click + **New plan** or the edit icon on an existing row.
- 2 Fill out name, prices, limits and feature toggles.
- 3 Click **Save**. Fitro360 immediately creates (or updates) the matching Stripe product and the monthly + annual prices, and stores their IDs against the plan.
- 4 If the sync status badge ever shows **Out of sync**, click **Resync** on that row, or use **Sync all** on the Stripe Settings page.

### ⚠ **Stripe prices are immutable**

Changing a plan's price does not modify the existing Stripe price — Stripe creates a new price object. The old one is kept so historical invoices remain accurate. Existing subscribers stay on their original price until they switch plans or you migrate them manually.

# Tenant Billing Overview

A single screen showing the financial health of every gym on the platform: who's paying, who's about to churn, and how much MRR is at risk.

Figure 5 — Tenant Billing Overview

## Headline KPIs

- **MRR** — Monthly Recurring Revenue across all active subscriptions.
- **ARR** — projected annual recurring revenue.
- **Active / Trialing / Past Due / Cancelled** — count badges so you can spot problems instantly.
- **At-risk MRR** — sum of MRR from tenants currently in the 3-day grace period.

## **Per-tenant table**

- Gym name, current plan, billing interval (monthly/annual).
- Subscription status badge with colour code.
- Next renewal date.
- Grace period deadline (only shown if the tenant is past due).
- Search by name and filter by status.

# Stripe Settings

The integration control panel. This page tells you whether Stripe is connected, whether you are in test or live mode, and lets you keep the SaaS plans in sync with Stripe with one click.

Figure 6 — Stripe Settings

## Connection status

- **Mode** — Test or Live, displayed as a coloured badge.
- **Account** — the connected Stripe account name and ID.
- **Webhook URL** — the public endpoint Stripe sends events to (auto-registered, no manual setup needed).
- **Last event received** — proof that the webhook pipeline is alive.

## Plan sync table

Every SaaS plan is listed with its Stripe product ID, monthly price ID, annual price ID and a sync status. Click **Resync** on a single row, or **Sync all** at the top to push every plan in one batch. Sync is idempotent — safe to run anytime.

### ✓ **Switching from Test to Live**

When you're ready to go live, swap the Stripe API key in the integration, then click **Sync all**. Fitro360 will create fresh Live products and prices and store the new IDs against each plan.

# Admin Reports

Cross-tenant analytics for the entire platform. Use these reports for board updates, investor decks, or capacity planning.

Figure 7 — Admin Reports

## Available reports

- Signup funnel — visits, signups, trial-to-paid conversion.
- Cohort retention — how many tenants from each month are still paying.
- Plan distribution — share of tenants on each plan tier.
- Revenue trend — MRR over time with month-over-month growth.
- Churn — voluntary vs. involuntary (failed payment) cancellations.

# Activity Log

An immutable, searchable timeline of every consequential event on the platform: tenant created, plan changed, payment failed, admin signed in, settings modified, etc.

Figure 8 — Activity Log

## Filtering

- By actor (which user did it).
- By tenant (which gym was affected).
- By event type (signup, payment, configuration, etc.).
- By date range.

### ✓ Audit-ready

Activity log entries are never deleted. Export the filtered view to CSV when responding to security or compliance audits.

# Notifications

Your personal inbox for platform-level alerts: payment failures, support escalations, system warnings and announcements.

Figure 9 — Notifications

## Notification types

- **Critical** (red) — webhook failures, integration outages, suspended tenants.
- **Warning** (amber) — past-due payments, expiring trials.
- **Info** (blue) — new tenant signups, plan changes, scheduled maintenance.

# System Settings

Global configuration that applies to every tenant on the platform — branding defaults, email templates, security policies, and feature flags.

Figure 10 — System Settings

## Configurable areas

- Default branding (logo, primary/secondary colours) for new tenants.
- Transactional email templates (welcome, invoice receipt, password reset).
- Password policy (minimum length, complexity, rotation).
- Session timeout and 2FA enforcement.
- Feature flags to roll out new modules to a subset of tenants.

## PART 3

# Gym Owner

Gym Owners have the broadest set of capabilities inside their gym's workspace: members and memberships, staff, schedule, finance, tax compliance, growth, and SaaS subscription. This part walks through every screen you will use to run the business.

# Owner Dashboard

The Owner Dashboard is your business at a glance: today's revenue, member churn, upcoming classes, equipment alerts, and AI-suggested actions.

Figure 11 — Owner Dashboard

## Tile reference

- **Today's revenue** — gross, with a sparkline of the last 7 days.
- **Active members** — total active vs. churned this month.
- **Check-ins today** — live counter that updates as members swipe in.
- **Outstanding invoices** — unpaid amount with a one-click link to chase them.
- **Classes today** — your schedule for the next 12 hours.
- **Inventory alerts** — items below their reorder threshold.

# Members

The members module is where you manage everyone who has signed up at your gym — active, expired, frozen, or prospects.

| Member             | Email               | Plan      | Trainer    | BMI | Expires      | Status  |
|--------------------|---------------------|-----------|------------|-----|--------------|---------|
| LT Lily Thomas     | lily.t@email.com    | Monthly   | Unassigned | —   | May 24, 2026 | Active  |
| DW Daniel White    | d.white@email.com   | Quarterly | Unassigned | —   | May 7, 2026  | Active  |
| CA Chloe Anderson  | chloe.a@email.com   | Monthly   | Unassigned | —   | May 22, 2026 | Active  |
| RT Ryan Taylor     | ryan.t@email.com    | Annual    | Unassigned | —   | Jul 1, 2026  | Active  |
| SM Sophia Martinez | sophia.m@email.com  | Monthly   | Unassigned | —   | May 17, 2026 | Frozen  |
| EL Ethan Lee       | ethan.lee@email.com | Quarterly | Unassigned | —   | May 27, 2026 | Active  |
| OB Olivia Brown    | olivia.b@email.com  | Monthly   | Unassigned | —   | Apr 17, 2026 | Expired |
| JW James Wilson    | j.wilson@email.com  | Annual    | Unassigned | —   | Oct 9, 2026  | Active  |

Figure 12 — Members

## List view capabilities

- Search by name, phone, email or member ID.
- Filter by status (active, expired, frozen, lead), plan, branch, or trainer.
- Bulk actions — send broadcast SMS/email, export to CSV, freeze multiple memberships.
- Quick actions per row — view profile, take payment, freeze, renew.

## Member profile

Click any row to open the full profile: personal details, photo, emergency contact, current and historical memberships, attendance log, payment history, body measurements / progress photos, assigned trainer, signed waivers, and notes.

### ✓ **Birthday workflow**

Use the filter **Birthday this week** and the bulk SMS action to send personalised greetings — a small touch that drives renewal rates.

# Membership Plans

These are the membership packages your gym sells (e.g. Monthly Unlimited, Annual Premium, Student PT-only, Day Pass). Different from the SaaS plans Fitro360 sells you — these are what your members buy.

Figure 13 — Membership Plans

## Plan attributes

- Name, description and price.
- Duration (days/weeks/months/years) and auto-renewal flag.
- Inclusions — gym access, classes count, PT sessions count, sauna, pool, etc.
- Branch availability — restrict the plan to specific branches.
- Visibility — public (sellable from member portal), private (staff-only), archived.

# Trainers

The trainer roster — your full team of personal trainers and class instructors with their specialties, schedules and assignments.

The screenshot shows the 'Trainers' management page in the Iron Temple Enterprise Suite. The left sidebar contains a navigation menu with categories like Overview, Membership, Staff, Finance, Growth, Operations, Procurement, Reports, Tax & Compliance, and System. The main content area is titled 'Trainers' and includes a sub-header 'Manage your gym trainers and their profiles'. At the top right of the main area is a '+ Add Trainer' button. Below the header, there are three summary cards: '3 Total Trainers', '3 Active', and '0 Inactive'. A filter bar shows 'All (3)', 'Active (3)', and 'Inactive (0)'. The main table lists three trainers: Sarah Mitchell (@trainer1), Mike Rodriguez (@trainer2), and Emma Chen (@trainer3). Each row includes columns for Trainer, Contact, Specializations, Experience, Status, and Actions. The status for all three trainers is 'Active'.

| Trainer                     | Contact                                 | Specializations | Experience | Status | Actions  |
|-----------------------------|-----------------------------------------|-----------------|------------|--------|----------|
| Sarah Mitchell<br>@trainer1 | ✉ sarah@irontemple.com<br>☎ +1 555-0112 | —               | —          | Active | 👁️ ✎️ 🗑️ |
| Mike Rodriguez<br>@trainer2 | ✉ mike@irontemple.com<br>☎ +1 555-0113  | —               | —          | Active | 👁️ ✎️ 🗑️ |
| Emma Chen<br>@trainer3      | ✉ emma@irontemple.com<br>☎ +1 555-0114  | —               | —          | Active | 👁️ ✎️ 🗑️ |

Figure 14 — Trainers

## Per-trainer info

- Profile photo, bio, certifications, specialties.
- Current member load and capacity.
- Hourly rate / commission structure.
- Availability and weekly hours.
- Performance KPIs — sessions delivered, member retention, average rating.

# Trainer Management

The advanced view used by owners and senior managers to assign members to trainers, set commission tiers, run payroll runs, and review performance scorecards.

Figure 15 — Trainer Management

## Workflows

- **AI auto-assign** — assign new members to the best-fit trainer based on goals, language, schedule and capacity.
- **Manual reassignment** — drag-and-drop members between trainers.
- **Commission setup** — flat percentage, tiered, or per-session.
- **Payroll period close** — calculate and export trainer earnings for the month.

# Schedule

A unified calendar showing every class, PT session, room booking and staff shift. View by day, week, month, or by trainer/room/branch resource.

Figure 16 — Schedule

## Working with the calendar

- Click an empty slot to create a new class or PT session.
- Drag events to reschedule.
- Resize an event to change its duration.
- Switch the resource axis to view conflicts by trainer, room, or branch.
- Recurring events — daily / weekly / custom rules.

### ✓ Conflict prevention

When you drop an event into a slot that already has a trainer or room booked, the conflicting event is highlighted in red and the save button is disabled until you resolve it.

# Check-In Desk

The kiosk-style screen used at the front desk. Members can check in by scanning a QR code, swiping a card, or having staff search by name. The screen also shows live class capacity and welcomes returning members by name.

Figure 17 — Check-In Desk

## Check-in methods

- QR code scan via the desk camera or member's phone.
- RFID / barcode card swipe.
- Manual search by name, phone, or member ID.
- Walk-in / day-pass payment flow built in.

## Automated checks

- Membership active? If expired, payment screen appears.
- Outstanding balance? Optional alert before allowing entry.
- Signed waiver on file? If not, e-signature pad appears.
- Class booked? Confirms the booking and marks attendance.

# Analytics

Visual dashboards covering revenue, attendance, retention, peak hours and trainer performance. Built for owners who want to make decisions, not just look at numbers.

Figure 18 — Analytics

## Key dashboards

- **Revenue** — gross, net, by plan, by branch, with comparison to previous period.
- **Attendance heatmap** — by hour and day-of-week, helps you staff peak hours.
- **Member retention cohort** — by signup month, see who's still paying after 1, 3, 6, 12 months.
- **Trainer leaderboard** — sessions, retention, ratings.
- **Class fill rates** — which classes consistently sell out vs. underperform.

# Operational Reports

Tabular, exportable reports designed for accountants, auditors and tax agents. Every report can be filtered, dated and exported to CSV / Excel / PDF.

Figure 19 — Operational Reports

## Report library

- Daily collection summary.
- Membership sales register.
- Outstanding receivables ageing.
- Trainer commission statement.
- Class attendance roster.
- Inventory movement.
- Tax (VAT / GST) report by tax period.

# Branches

If your gym operates across more than one location, this is where you set them up. Each branch can have its own price list, opening hours, staff and inventory.

Figure 20 — Branches

## Per-branch settings

- Address, contact, opening hours.
- Manager assignment.
- Membership plans available.
- Tax registration (separate VAT / TRN per branch if required).
- Branch-level branding overrides.

# Inventory

Stock control for retail items, supplements, towels, merchandise and consumables.

Figure 21 — Inventory

## Capabilities

- SKU master with barcode, cost price and sale price.
- Branch-level stock levels.
- Reorder point alerts.
- Inbound (purchase / supplier bill) and outbound (sale / consumption / transfer) movements.
- Stock-take with variance reconciliation.

# Suppliers

Your vendor master — equipment manufacturers, supplement distributors, cleaning supplies, utility providers, etc.

Figure 22 — Suppliers

## Per-supplier info

- Contact details and tax registration number (TRN).
- Default payment terms (e.g. Net 30).
- Linked products and historical purchase volume.
- Outstanding payable balance.

# Supplier Bills

Record bills received from your suppliers, attach the original invoice PDF, and schedule payment.

Figure 23 — Supplier Bills

## Bill workflow

- 1 Click **+ New bill** and pick the supplier.
- 2 Enter bill number, date, due date, line items and tax.
- 3 Attach the supplier's invoice PDF or photo.
- 4 Save as **Draft** or post directly to the ledger.
- 5 When paid, click **Record payment** — the payable balance and bank balance update automatically.

### ✓ Input VAT capture

Enter the VAT line on every supplier bill — Fitro360 automatically pulls these into your VAT Return as input tax credit, reducing what you owe.

# Invoicing

Generate professional, tax-compliant invoices for memberships, PT packages, retail sales, corporate clients, or any custom service.

Figure 24 — Invoicing

## Invoice features

- Sequential, gap-free numbering required by tax authorities.
- Multi-currency support with live FX.
- Discount lines, tax lines, and rounding controls.
- Email directly to the customer with a payment link.
- Credit notes and refunds.
- Recurring invoices (e.g. monthly corporate billing).

# Payments

All money received — membership fees, PT package sales, retail, walk-in fees — recorded with the right payment method (cash, card, bank transfer, online).

Figure 25 — Payments

## What you can do

- Take payment against a specific invoice or as an on-account credit.
- Reconcile against bank statement at month-end.
- Process partial and split payments (e.g. 50% card + 50% cash).
- Issue refunds with mandatory reason code.
- Generate daily collection report for handover.

# Maintenance

Schedule and log maintenance for gym equipment — preventive (monthly inspection of treadmills) and reactive (broken cable on rower).

Figure 26 — Maintenance

## Capabilities

- Asset register linked to Fixed Assets module.
- Recurring preventive schedules with email/SMS reminders.
- Service tickets — open, in progress, resolved.
- Cost tracking per asset and per supplier.
- Out-of-service flag — automatically removes the equipment from member-facing booking.

# Fixed Assets

The asset register required for accounting and corporate tax: every piece of capital equipment with its acquisition cost, depreciation method, and current book value.

Figure 27 — Fixed Assets

## Tracked information

- Asset name, category, serial number, branch location.
- Purchase date, cost, supplier, invoice reference.
- Depreciation method (straight-line, reducing balance) and rate.
- Accumulated depreciation and net book value (auto-calculated each period).
- Disposal — record sale price or write-off, calculate gain/loss.

# Membership Transfers

Handle the transfer or freeze of memberships — common when members travel, get injured, or pass their membership to a friend.

Figure 28 — Membership Transfers

## Supported actions

- **Freeze** — pause a membership for a defined number of days; the end date is extended automatically.
- **Transfer to another member** — move remaining days to a different person, with audit trail.
- **Branch transfer** — move a membership between two of your branches.
- **Plan upgrade / downgrade** with prorated charge or credit.

# Coupons & Discounts

Create promotional coupon codes for sign-up campaigns, social-media offers, corporate partnerships, or loyalty rewards.

Figure 29 — Coupons & Discounts

## Coupon options

- Percentage or fixed amount discount.
- Restricted to specific plans, branches, or new members only.
- Usage limit per customer and overall.
- Validity window.
- Auto-expire and automated reporting on usage and revenue impact.

# Referrals

A built-in referral programme that rewards existing members for bringing friends. Tracks the referral chain end-to-end and pays the reward automatically.

Figure 30 — Referrals

## How it works

- Each member gets a unique referral code (visible in the member portal).
- When a new member signs up using the code, both parties earn the configured reward (free days, account credit, or merchandise).
- The referral leaderboard surfaces your top advocates so you can thank them publicly.
- Detailed report shows revenue attributable to referrals vs. paid ads.

# Tax Settings

Configure your gym's tax registration, applicable tax codes, and rounding rules — required for VAT, GST or sales-tax compliance in your jurisdiction.

**Iron Temple**  
ENTERPRISE SUITE

Press **WB** to toggle

## Tax Settings

Configure your UAE FTA tax registration and filing schedule.

**Legal Entity**  
Information used on returns and invoices.

Legal Name:  Trade License Number:

Market:

**VAT (Value Added Tax)**  
FTA VAT registration number and filing cadence for VAT 201 returns.

TRN (15-digit):  VAT Registered On:  Filing Frequency:

**Corporate Tax**  
UAE CT applies at 9% above AED 375,000 taxable income (since 1 Jun 2023).

Corporate Tax TRN:  CT Registered On:  Financial Year Start (Month):

MJ Marcus Johnson  
GYM OWNER

Figure 31 — Tax Settings

## What to configure

- Tax Registration Number (TRN / VATIN / GSTIN).
- Applicable tax rates (e.g. UAE 5% VAT, India 18% GST, zero-rated, exempt).
- Tax period (monthly or quarterly).
- Rounding rule and tax inclusive/exclusive default.
- Reverse-charge mechanism settings if applicable.

### ⚠ Lock once filed

Once a tax period is filed, lock it. Subsequent edits to invoices in that period will be blocked unless explicitly reopened by an owner with a recorded reason.

# VAT Returns

Compile, review and file VAT returns directly from Fitro360. The return is generated from your invoices and supplier bills with full drill-down to the underlying transactions.

Figure 32 — VAT Returns

## Workflow

- 1 Click **Generate return** for the desired tax period.
- 2 Review output VAT (from invoices) and input VAT (from supplier bills).
- 3 Drill into any line to see the contributing transactions.
- 4 Click **Lock & file** to finalise. The system generates a tax-authority-formatted file and a PDF audit pack.
- 5 Record the payment to the tax authority in Payments → Tax Payments.

# Corporate Tax

For jurisdictions with corporate (income) tax, this module computes taxable profit from your bookkeeping and prepares the corporate-tax return.

Figure 33 — Corporate Tax

## What it does

- Pulls revenue and expense from the GL by account.
- Applies non-deductible expense rules and depreciation as per local code.
- Computes taxable profit and tax payable.
- Produces the supporting computation worksheet and audit pack.

# Gym Settings

Your gym's master configuration: branding, business details, integrations, staff permissions, and notification preferences.

**Iron Temple**  
ENTERPRISE SUITE

Press **WB** to toggle

## Settings

Customize your gym's branding and information

### Gym Information

Basic details about your gym

Gym Name  
Iron Temple Fitness

App Display Name  
Iron Temple

Market / Region  
UAE (AED, VAT 5%)

Email  
info@iron temple.com

Phone  
+1 555-0101

Address  
123 Fitness Ave, Los Angeles, CA 90012

### Branding

Customize your gym's color theme

Primary Color  
#1e40af

Secondary Color  
#3b82f6

Figure 34 — Gym Settings

## Configuration sections

- **Branding** — logo, primary colour, secondary colour, favicon, member-portal hero image.
- **Business profile** — legal name, trading name, address, contact, tax registration.
- **Operating hours** — per branch, with public holiday calendar.
- **Integrations** — payment gateways, SMS provider, email provider, accounting export.
- **User roles & permissions** — granular per-screen control.
- **Notification preferences** — which events trigger emails / SMS / in-app.

# Subscription & Billing

Your Fitro360 subscription — the monthly or annual fee you pay to use the platform. This is separate from the memberships your gym sells. From here you can change plan, update your card, and download invoices.

Figure 35 — Subscription & Billing

## What you see

- **Current plan** with status badge (Active, Trialing, Past Due, Cancelled).
- **Card on file** — brand, last four digits, expiry month/year.
- **Next renewal date** and the amount that will be charged.
- **Plan picker** — switch between Basic, Pro, Enterprise; toggle Monthly / Annual.
- **Invoice history** — every charge with View and PDF download links.

## Common workflows

- 1 **Subscribe for the first time** — pick a plan, click Subscribe, and complete checkout. A new card is captured and the trial converts to paid.
- 2 **Change plan** — pick the new plan from the list. The change applies at the next renewal with prorated credit/charge.
- 3 **Switch monthly ↔ annual** — toggle the interval before clicking Change.
- 4 **Update card** — opens the secure billing portal where you can replace the card on file.
- 5 **Cancel** — opens the same portal and lets you cancel at the end of the current period (you keep access until then).

### ⚠ Past-due grace period

If a renewal payment fails, your account is marked Past Due and a 3-day grace period begins. A banner shows the deadline. Update your card before the deadline to avoid suspension. Once suspended, you can still log in to settle the balance, but member-facing operations are paused.

# Notifications

Your inbox for events that need your attention: failed payments, low inventory, expiring memberships, staff requests, and system alerts.

Figure 36 — Notifications

## Notification streams

- **Financial** — invoice paid, refund processed, supplier bill due.
- **Operational** — equipment ticket opened, low stock, class waitlist filled.
- **Members** — new signup, expiring membership, birthday.
- **System** — backup completed, integration failure, plan limit warning.

## PART 4

# Trainer

Trainers see a focused workspace built around their day: today's sessions, assigned members, check-in shortcuts, and notifications.

# Trainer Portal

Your home screen as a trainer. Shows today's bookings, your assigned members, alerts, and quick actions.

Figure 37 — Trainer Portal

## What you see

- **Today's sessions** — every PT session and class you're delivering today, with member names.
- **Assigned members** — the members currently under your coaching.
- **Performance card** — your KPIs for the month (sessions delivered, attendance rate, member retention).
- **Alerts** — members who haven't checked in for 14 days, expiring memberships, etc.

# Schedule

Your personal calendar — only your sessions and classes, no clutter from other trainers.

Figure 38 — Schedule

## What you can do

- Day, week and month views.
- Add notes to a session (e.g. plan for next workout).
- Mark a session as completed and capture session notes.
- Request a swap with another trainer (subject to manager approval).
- Block out time-off; the booking system blocks new bookings against you.

# Assigned Members

The list of members currently assigned to you for personal training or coaching.

Figure 39 — Assigned Members

## Per member

- Profile photo, name, contact and goal.
- Current programme and progress towards the goal.
- Last session date and adherence rate.
- Body measurements / progress photos timeline.
- Quick action — log a new session, send a message, schedule a session.

# Check-In

A simplified check-in screen tailored for trainers running classes — find your roster fast and tick attendees in.

Figure 40 — Check-In

## Workflow

- 1 Pick the class from today's schedule.
- 2 The roster of booked members appears.
- 3 Tick each attendee; mark no-shows in red.
- 4 Save — attendance is logged and counts towards member retention metrics.

## PART 5

# Member Portal

Members enjoy a simple, mobile-friendly portal where they can book classes, see their progress, manage their profile, and pay any outstanding balance.

# Member Dashboard

The first screen members see when they sign in — a friendly summary of their membership, next class, and progress streak.

Figure 41 — Member Dashboard

## Tiles

- Membership status — plan, days remaining, renewal date.
- Next class booked.
- Streak (consecutive weeks with at least one visit).
- Outstanding balance with one-click pay.
- Personal trainer contact card.

# My Schedule

Browse the gym's class timetable and book a spot. Cancel up to a configurable cutoff time without penalty.

Figure 42 — My Schedule

## What you can do

- View today, this week or by class type (yoga, HIIT, spin).
- Filter by trainer or branch.
- Book a class — instant confirmation if a spot is free, otherwise join the waitlist.
- Cancel a booking from the same screen.
- Add upcoming bookings to your phone calendar (Google / Apple) in one click.

# My Progress

Track personal-best metrics, body measurements, attendance streak, and progress photos over time.

Figure 43 — My Progress

## Charts

- Visits per week — bar chart showing consistency.
- Body measurements — weight, body-fat %, key circumferences over time.
- Personal records — bench, squat, deadlift, 5K time, etc.
- Progress photos — front / side / back, side-by-side comparison slider.

# My Profile

Personal details, password, payment methods on file, and signed waivers.

Figure 44 — My Profile

## Editable

- Profile photo, contact details, emergency contact.
- Communication preferences (email / SMS / push).
- Saved payment methods (replace card, remove card).
- Download signed waivers and tax invoices.
- Request to delete account / GDPR data export.

  
**PART 6**

# Subscription Billing Deep Dive

This part is a more technical reference for how Fitro360's SaaS billing works end-to-end — useful for owners who want to understand exactly what happens when a payment succeeds, fails, or is refunded; and for finance teams reconciling Stripe payouts against the Fitro360 ledger.

# How a subscription is created

---

When a gym owner clicks **Subscribe** on the Billing page, Fitro360:

1. Looks up (or creates) a Stripe Customer for the tenant.
2. Opens a Stripe Checkout Session in subscription mode for the chosen plan and interval (monthly or annual).
3. Redirects the owner to Stripe's secure hosted checkout page where the card is collected by Stripe — the card never touches Fitro360 servers.
4. On success, the owner is returned to `/settings/billing?status=success` and Stripe fires `checkout.session.completed` + `customer.subscription.created` events to the webhook.
5. Fitro360 stores the Stripe subscription ID, current period end, and updates the tenant status to **active**.

# Renewal cycle

---

On the renewal day:

1. Stripe attempts to charge the card on file.
2. **If successful** — Stripe fires `invoice.payment_succeeded`; Fitro360 advances the tenant's `currentPeriodEnd` and writes the invoice to the history table.
3. **If the card is declined** — Stripe fires `invoice.payment_failed`; Fitro360 sets status to **past\_due**, starts a 3-day grace period and emails the owner.
4. Stripe retries the charge over the next few days according to its smart-retry rules.
5. If a retry succeeds during the grace period — status returns to **active**, no service interruption.
6. If the grace period elapses without payment — the background sweeper marks the tenant **suspended**; member-facing operations stop until payment is settled.

# Webhook reliability and idempotency

---

Stripe is deliberately at-least-once: it will redeliver any event for which it does not receive a 2xx response within a short window. Fitro360 handles this safely:

- Every webhook signature is verified with the endpoint secret before any business logic runs.
- Each Stripe event ID is checked against the `processed_stripe_events` table. If it has been seen before, it is acknowledged with 200 immediately — no duplicate work.
- If the handler succeeds, the event ID is stored. If it fails, no record is written and Fitro360 returns 500 so Stripe retries.
- A scheduled sweep runs every 6 hours to catch tenants whose grace period has elapsed even if the webhook for that elapse was missed.

# Plan-to-Stripe sync

---

When a Platform Administrator creates or edits a SaaS plan:

1. Fitro360 creates (or updates) the Stripe Product with the plan's name and description.
2. It creates a new monthly Price object with the configured monthly amount.
3. It creates a new annual Price object with the configured annual amount.
4. The Stripe IDs are stored on the plan ( `stripeProductId` , `stripeMonthlyPriceId` , `stripeAnnualPriceId` ).

Stripe Prices are immutable, so changing a plan's price creates a new Price object — historical subscribers remain on the original price (preserving invoice history) until they choose to switch.

If a sync fails (network blip, Stripe maintenance), the plan row shows **Out of sync** and you can click **Resync** on the Stripe Settings page to retry. The operation is fully idempotent.

# Security model

---

- **No card data on Fitro360 servers** — all card capture happens on Stripe's hosted Checkout / Billing Portal pages.
- **Webhook signature verification** — every webhook is HMAC-verified before processing.
- **Trusted redirect URLs** — Stripe Checkout success / cancel URLs are built from the server's environment, never from the request Host header (prevents open redirect attacks).
- **Tenant isolation** — every billing API call is scoped to the calling user's tenant. Even with admin override, you cannot accidentally take payment for the wrong gym.
- **Audit log** — every billing event (subscribe, plan change, cancel, refund) writes an immutable row to the activity log with actor, timestamp, and Stripe event ID.

  
**PART 7**

# Troubleshooting & FAQ

Quick answers to the questions and issues users hit most often.

# I can't sign in

---

1. Confirm your URL is correct — your gym's Fitro360 workspace URL, not the marketing site.
2. Try the **Forgot password?** flow.
3. If you still cannot get in, contact your gym owner / administrator. They can reset your password from the User Management screen.
4. If you are the gym owner and locked out, contact Fitro360 support — they can reset your password after verifying your identity.

# The 'Subscribe' button is not visible on the Billing page

---

- This typically means Stripe is not yet connected for the platform. Contact your platform administrator.
- Or you may already have an active subscription — in which case you'll see **Change plan** and **Update card** instead.

# A renewal payment failed — what happens?

---

1. Your tenant is marked **Past Due** and a 3-day grace period starts.
2. A banner appears at the top of every screen with the grace deadline.
3. Stripe retries the charge automatically over the next few days using smart-retry logic.
4. To clear it manually, go to **Settings → Billing → Update card** and enter a new card. Stripe will retry the failed invoice immediately.
5. If the grace period elapses without payment, the workspace is suspended. You can still sign in to settle the balance, but member-facing features pause.

# How do I change from monthly to annual billing?

---

1. Go to **Settings** → **Billing**.
2. Toggle the interval switch from **Monthly** to **Annual**.
3. Click **Change plan** on your current tier.
4. Confirm in the secure billing portal. The change is applied immediately with prorated credit for the remaining monthly period.

# I changed a SaaS plan price — why are existing tenants still on the old price?

---

Stripe Prices are immutable — Fitro360 creates a new Price object when you change the amount. Existing subscribers stay on the original price for two important reasons:

- Historical invoices remain accurate.
- You don't accidentally surprise paying customers with a price change.

If you want to migrate existing subscribers to the new price, do it in Stripe Dashboard → Customers → Subscription → Update.

# Members say their booking didn't save

---

1. Confirm the class is still open (capacity not full and within the cancellation cutoff).
2. Check the member's status — frozen or expired memberships cannot book.
3. Look at the Activity Log for the member — the booking attempt is always logged with the reason for failure.
4. If the booking is in the database but not on the schedule, do a hard refresh (Ctrl/Cmd + Shift + R).

# How do I add a new staff user?

---

1. Go to **Settings → Users & Permissions**.
2. Click **+ New user**.
3. Enter their name, email, username and pick the role (Manager, Trainer, Sales, Member).
4. Set a temporary password or email an invite — they'll be prompted to change it on first sign-in.
5. Optionally restrict them to specific branches.
